FACELESS48 · LESSON 2

Get me set up

Teach the plug-in who you are, one time. Every video after this already looks like you.

> Plan on 30 to 60 minutes. You answer a few questions, look at a few previews, and approve what gets saved. You only do this once.

Words in bold are what you say to your assistant.

1. Start with one sentence

Tell your assistant: **Get me set up.** That is the whole command.

2. Your business

It asks for your brand name exactly as you want it on screen, a tagline if you have one, and in a sentence or two who your videos are for and what you help them with. It writes this down so it never has to ask again.

3. Your logo

The best file is a PNG with a transparent background, at least 1000 pixels wide. If your logo has a white box around it, your assistant tells you, and you can keep it or swap in a better file.

Copy the logo into your project's brand folder and tell your assistant the file name.

4. Your colors

You need three: a main color, a darker version, and your darkest one for backgrounds. They are written as hex codes, a pound sign and six characters.

Canva	Click a colored shape in a branded design. The code shows next to the color.
Your website	Right-click a colored button, choose Inspect, and look for the code.
Your logo	Give your assistant the logo and it suggests colors. They are only suggestions. Nothing is saved until you say yes.

5. Your metallic finish

Your videos have a thin metal trim on frames, lines and check marks. Choose gold, rose gold, silver or copper. Your assistant shows you the choices so you are not guessing from a word.

6. Fonts

Pick a pairing from the ones that come with the plug-in. If you have a brand font that is not on the list, tell your assistant. A custom font has to be added and tested, so it cannot be promised on the spot.

7. Who is on screen

Your face, an AI avatar of you made in another tool, a cartoon or 3D character you own, the built-in stick figure, or no one, just voiceover and graphics. You can pick more than one.

If you bring your own character art, make sure you own the rights to it.

8. Your caption style

Your assistant makes one image showing three caption styles side by side, in your colors.

Editorial	Elegant, with words arriving in polished lockups.
Heavy	Big and bold, built for social.
Pill	Classic subtitles in a rounded pill.

Pick the one that feels like you. You can still ask for a different style on any single video later.

9. Your defaults

Portrait for Reels, TikTok and Shorts, landscape for YouTube, or both. Your talking-head style. Your explainer style. And whether you want background music.

10. Check the summary

Everything is saved into two files: your brand file and a plain-English profile. Your assistant reads the summary back and asks if you want to change anything. This is the moment to say yes if something felt off.

Changing it later

Say **Change my brand.** It shows you what is saved and asks what to update. It never makes you start over.

Before you move on

- ☐ I typed Get me set up.
- ☐ My logo is in the brand folder.
- ☐ I have my three hex colors.
- ☐ I chose a metallic finish and a caption style.
- ☐ I read the saved summary and confirmed it.

Transcript

Welcome to Lesson 2. This is where you teach the plugin who you are. You do it once. After that, every video you make will already look like you and your brand, planned for about 30 to 60 minutes for your real setup.

I'll move a little faster here so you can see the whole process. Step 1. The command. Start with one sentence and type "Get me set up."

Or, if you're still on the same screen as in Lesson 1, just click "Start brand setup." Brand setup takes about 30 to 60 minutes. Everything you answer is saved, so you only do it once. Now, step 1 of 9.

Your business. The assistant starts by asking about your business. Your brand name exactly as you wanted on screen, a tagline if you have one, and in a sentence or two, who your videos are for and what you help them with. It writes this down, so it never has to ask again.

Let's answer these. You may already have yours written down somewhere, as I do. I'll enter "C3 Global" exactly as I want it to appear on screen. Yours may not be your company, it might be your specific influencer name if you're an influencer, but for most people, it's a company, brand name, or business.

If you're a consultant, it would be your personal brand name. I do have a slogan or tagline. It's optional and can appear on end cards. For me, I don't use my tagline that often, so I'll skip it.

Then, in number 3, in one or two sentences, describe who your videos are for and what you help them with. I'm going to my carefully curated Notion doc and pasting this whole section. Yours may not be a Notion doc, it could be a google doc, notes, or anywhere else. All you do is copy and paste.

It could be on your website, and you can copy and paste from there too. Now, step 2 of 9, your logo. The assistant asks you to copy your logo file into a specific folder. This is my folder, Your folder will be exactly where your assistant says it is.

Once you do that, it asks you to tell it the file name. I'll find my C3 global logo. It says the best type of logo to send is a transparent logo, meaning a logo with transparency and no background. This one isn't downloaded yet, but I'm going to use it.

It's the right one. I also have it in white. I'll take these two and bring them over to the files. I'm hoping this is.

It says Faceless48, my videos. Well, that's not exactly where I have it, is it? So, I'm going to tell it where I saved the file. I think I can copy the path.

I'll copy it and talk to the assistant the same way I would any other day. Hey, I didn't see that specific folder or file. What I did was save it to the folder we're already working in. Well, the path didn't save it, but this is what I'm telling it.

Let's see what the assistant does. It found both logos. Even if your assistant gives you a command that doesn't seem like it will work for you, that's okay. You can just continue to talk to it as you would any other time.

It found them. You saved the two files in the working folder. It copied them to where it needed them to be. Both have transparent backgrounds and it has the tagline already.

Then it asks, use the black and gold logo as the main one and the white version on dark backgrounds. Yes, please use the main logo and the white one on dark backgrounds. Next, step three of nine, your brand colors. The assistant will try to suggest colors from your logo since you didn't mention the brand kit, but I have hex codes.

It tells me there are some hex codes. If you've been a long time user of Claude or GPT, it more than likely already knows your brand. You can tell it to pull in the brand info it already has and make sure it confirms with you first. That's what I'm going to do now.

You already have my brand details. You can also connect with my Notion ContentOS doc to pull in the hex codes and make sure you get the metallic finishes as well. That's what I asked it to do. If you don't have your brand colors, that's okay.

You can go to Canva or go to Google and type in color hex codes to find your specific hex code. Any that match your brand will do. You can also go to a color hex code site and find yours. You can do this in Canva too.

If you have a brand kit in Canva, you can look at your hex codes from your brand kit and pull them over. Now it found the brand blueprint page for my brand and brought in all of my colors and hex codes. The Notion Note says to use crisp white and no blue. It's telling me all of my preferences and it's asking me about the two darker shades and the metallic finish.

Now step four is the metallic finish. There are four choices, metallic gold, metallic rose gold, metallic copper, and metallic silver. The metallic finish is just an accent, but it really makes the production look high quality and gives it a certain aesthetic if that's what you want for your business. It's asking me two questions.

Is crimson the main color? The logo itself is black and gold, so is rose gold the default metallic finish? Ordinarily, yes, crimson would be the primary color. But for most of my designs, actually, yes, crimson is my main color and my preferred metallic finish is copper, metallic copper, metallic rose gold is secondary and metallic gold is tertiary.

Now step five of nine fonts. It has pulled in my preferred fonts because it got them from my brand doc. You may not have that, so you can go to fonts.google.com, use Canva, or go to any other place where you have a specific font you like. You can explore all the different types of fonts.

It's really cool. Then report back to your agent. For me, these will do. These are fine.

Now step six of nine. Who appears in your videos? For Faceless48, most of us are creators who use B-roll with voiceovers, AI avatars, 2D animations, or cinematic clips. Whatever it is, you just need to tell the assistant what you're going to do.

Do you make your own talking head videos? If so, say you'll be on camera. You film yourself and edit it as a talking head video. Or there's an AI avatar review, which is what I mostly use.

Please note that the Faceless48 creator plugin does not generate avatars. It can edit footage, but it does not generate avatars. You can find them in HeyGen, Jogg.ai, Synthesia, MediaPlace.io, and a few others. You can even create an AI avatar in Google Flow.

Is it a 2D or 3D character that you own? You would give a transparent PNG or WebP with poses all the same size, and they replace the stick figure I personally use in my explainer videos. You also have a built-in stick figure. Nothing to upload.

You can just use what the system already creates for you. There's also voiceover with graphics only or B-roll only. We'll talk about how to add video B-roll and include your voiceover in an upcoming lesson. In step seven, it still wants to know who will be there.

I'll tell it, "Yes, I have an AI avatar and a stick woman." That's it. An avatar and a stick woman. Now, step seven goes a little deeper into your caption style.

It asks for your preferred caption style. As of this recording, there are three caption styles. But if you're watching this later, more have probably been added because the plugin is continuously updated. If you think you saw more than three, you probably did.

It asks, "What's your caption style?" Here's the first, the second, and the third. The third has a little pill. It tells you the one on the left is editorial.

The one in the middle is heavy with big bold words, and the pill is on the right. It says, "My suggestion for an institutional-led brand is editorial. Which do you want?" It gives you a suggestion based on your brand, and it's actually right.

I do prefer editorial, but sometimes I like to mix it up. So I'll tell it that. I prefer editorial, but sometimes I do like to mix it up. Now it's asking about video defaults.

What will be your main format? Will you mainly do portrait format for reels, TikTok, and shorts, landscape for YouTube, or both? For me, it's always been both. When I created this, I started by editing videos for both, so I'll continue with that.

Number two, Talking Heads style preset. Currently, there are six available. I normally use signature, but as you saw in the demo, I showed you what they all look like. You get to choose your main style preset, and of course, you can change it at any time.

Understand that the presets can change the caption style you just chose. If you want to change it back during editing, talk to your assistant and let them know. When I say assistant, I mean Claude or GPT. For number two, I'll go with signature and spotlight, but I also like show and tell.

And then number three, your explainer style. Whiteboard is clean line art, editorial or dark background with light figures. You get to choose. I'll say whiteboard because that's the one I've been using.

And then background music. You must use your own licensed tracks. I have a subscription, so I purchased mine, but you can use anything. I won't name any particular brands.

In lesson two, just below this video, you can find one of my favorites, which I use and recommend for licensed background music. You'll put it in a folder, but we'll talk about that in another session. So I'll say, yes, I have licensed tracks from there. You'll see it saving everything, all your answers into two files.

It will save your brand file and a plain English file. It reads the summary back to you. Everything you have here, your brand is saved. It reads back everything you just did.

And that's it. You're done. If you ever want to change your brand, say change my brand. Literally, that's all you have to say in the chat.

It shows you what's saved and asks, what do you want to update? It never makes you start over. Your next step is lesson three, where we get your footage and voiceover to your assistant. I'll see you in the next lesson.
