FACELESS48 · LESSON 1

Download, open and set it up

Get the plug-in onto your computer and let your assistant set everything up for you.

> This beta is for a computer with Claude Code or Codex and access to your local files. That means the desktop app or the terminal on your own computer, not the chat in your browser.

Words in bold are what you say to your assistant.

Before you start

You need one thing installed already: **Node**, version 20.6 or newer. If you are not sure, skip ahead. Your assistant checks for you and tells you if you need it. To install it, download the LTS version from nodejs.org and click through the installer.

1. Download

Your files are attached to Lesson 1 in your course. Download two of them: the plug-in zip (beta.10) and the Start Here guide.

2. Unzip it

Put the plug-in in a regular folder on your computer that is **not** synced to the cloud: not iCloud, not OneDrive and not Dropbox. Cloud sync can stall the install.

3. Open the folder in your assistant

Open that folder in Claude Code or Codex, on your own computer. Open the folder itself.

4. Say one sentence

> **Read START-HERE.md and set me up.**

That's the whole message. Your assistant reads the instructions and takes it from there.

5. Say yes to the setup

Your assistant asks where to keep your videos (it suggests a "Faceless48 Videos" folder) and asks your permission to install. Say yes. It then installs and tests everything inside that folder for you:

- the video tools
- the video browser it renders with
- the captions engine
- the cutout tools for effects that sit behind you

You don't install anything yourself and you don't type commands. The first run takes about 10 to 20 minutes, mostly downloading, so feel free to step away.

6. Read the report

When it finishes, you get a short report. Every line should say **ready**. If a line says **FIX**, it tells you in plain words what to do. Do that, then say **"set me up"** again. It skips everything that is already done.

On a Mac: a window may pop up asking to install Apple's Command Line Tools. Click Install, wait for it to finish (about 5 to 10 minutes), then say **"set me up"** again.

On Windows: if the report says Python is missing, install Python from python.org and tick "Add python.exe to PATH" on the first screen. You only need it for effects that sit behind you.

Claude Code or Codex

It works the same way in both. Open the folder, say the same sentence, and your assistant takes it from there.

What happens next

Right after setup, your assistant walks you through your brand: your name, logo, colors, finish, fonts and caption style. Plan on 30 to 60 minutes, once. That is Lesson 2. After that, every video, effect and carousel uses your brand automatically.

If you get stuck

Email **support@faceless48.com** with what you asked and the exact message you saw. Never include passwords or API keys.

Before you move on

☐ I downloaded the plug-in zip (beta.10) and the Start Here guide.

☐ I unzipped the plug-in into a folder that is not cloud-synced.

☐ I opened that folder in Claude Code or Codex on my own computer.

☐ I said "Read START-HERE.md and set me up" and gave permission.

☐ My setup report says ready on every line.

Stuck? Email support@faceless48.com with what you asked and the exact message you saw. Never include passwords or API keys.
